

<p>Sizes 6 & 10 up to 315 bar up to 60 L/min</p>	<p>Pressure Reducing Valve Direct Acting Type PRD, Series 10</p>	<p>Data Sheet R-1003/10.98 GB</p>
--	--	---

Features

- ◇ Compact construction.
- ◇ Drain amount minimal compared with balanced piston type, pressure reducing valve.
- ◇ Four pressure ratings.
- ◇ Three adjustment elements.

Type PRD

Functional Description

Type PRD6P Pressure Reducing Valve is a direct operated valve of the 3-way design, i.e. with pressure relief function on the reduced pressure side.

The valve is used to reduce the pressure on a section of a circuit. Pressure setting is by means of the pressure setting element (4). At rest, the valve is normally open, and fluid can flow unhindered from port A to port B. Pressure in port B is also present on the end of the spool (2), via control line (6), opposing the compression spring (3). When the pressure in port B reaches the pressure level set at spring (3), spool (2) moves to the control position and holds the pressure in port B constant.

Fluid to control the valve is taken from port B via control drilling (6).

If the pressure in port B rises still further due to external forces, the spool (7) is moved still further towards the compression spring (3).

This causes a flow path to be opened over the control land (8) in the control spool (2) to tank. Sufficient fluid then flows to tank to prevent any further rise in pressure.

The spring chamber is drained to tank externally via port Y.

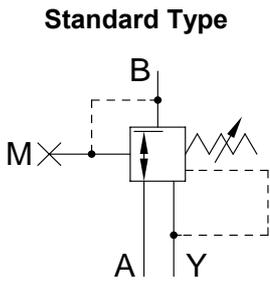

An optional non-return valve (5) is available to allow free flow from port B to A.

A pressure gauge connector (1), permits the 'reduced' pressure to be monitored.

Pilot oil drain external with non-return valve

Ordering Code – Pressure Reducing Valve, Direct Operated

PRD 6 P 10 1 // 150 Y C V

Pressure Reducing Valve, Direct Operated	Suitable Oil No Code: Mineral Oil V: Phosphate Ester W: Fatty Acid Ester, Water Glycol
Size 6, 10	Reverse Free-Flow Check Valve No Code: Without Reverse Check Valve C: With Reverse Check Valve
Type of Mounting P: Sub-plate Mounting	Drain Line Y: Externally drained
Series Number 10	Adjustable Pressure Range (bar)
Adjusting Element 1: Rotary Knob 2: Thread Pin with Hexagon and Protective Cap 3: Lockable Rotary Knob	

Code	Size	
	6	10
25	5 ~ 25	5 ~ 25
75	20 ~ 75	10 ~ 75
150	65 ~ 150	20 ~ 150
210	80 ~ 210	20 ~ 210

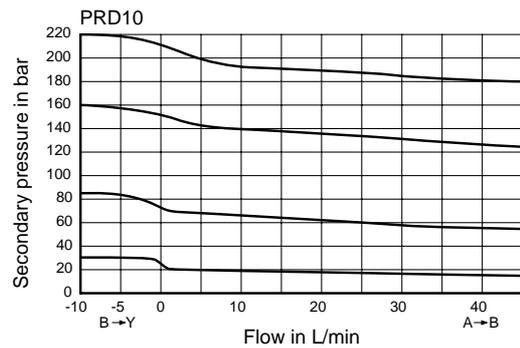

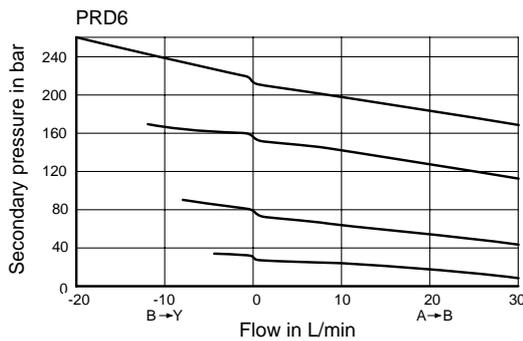

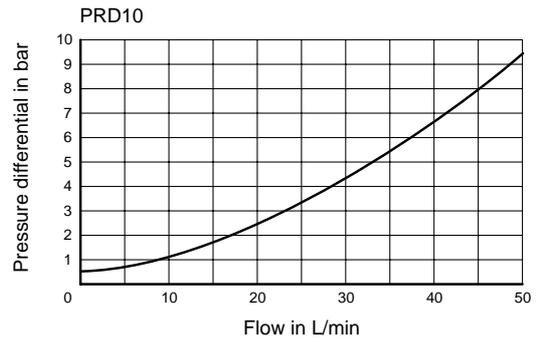

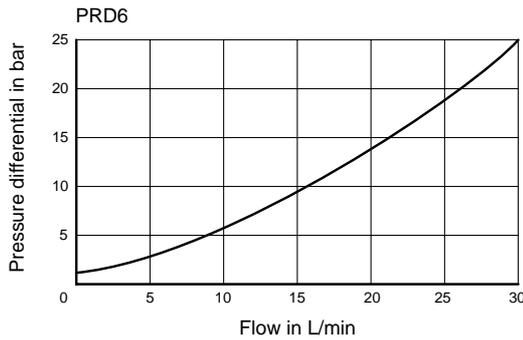

Technical Data

For applications outside the following parameters, please consult Kawasaki Precision Machinery (UK) Ltd.

Pressure Fluid	Mineral oil, phosphate ester, fatty acid ester and water glycol. Phosphate ester is only suitable for use with FPM seals.
Pressure Fluid Temperature Range	- 20°C to +70°C
Degree of Contamination	Maximum permissible degree of contamination of fluid is to NAS 1638 Class 9. Kawasaki recommend a filter with a retention rate of $\beta_{10} \geq 75$.
Viscosity Range	2.8 to 380cSt
Maximum Operating Pressure	Size 6 – Up to 315 bar (Port A), up to 210 bar (Port B), up to 60 bar (Port Y). Size 10 – Up to 15 bar (Port Y).
Maximum Settable Pressure	Up to 25 bar; up to 75 bar; up to 150 bar; and 210 bar
Maximum Flow	Up to 30 L/min (size 6) Up to 45 L/min (size 10)
Weight	Approximately 1.2 kg (size 6), 3.2 kg (size 10)

Characteristic Curves

Measure at $\nu = 36\text{cSt}$ and $t = 50^\circ\text{C}$

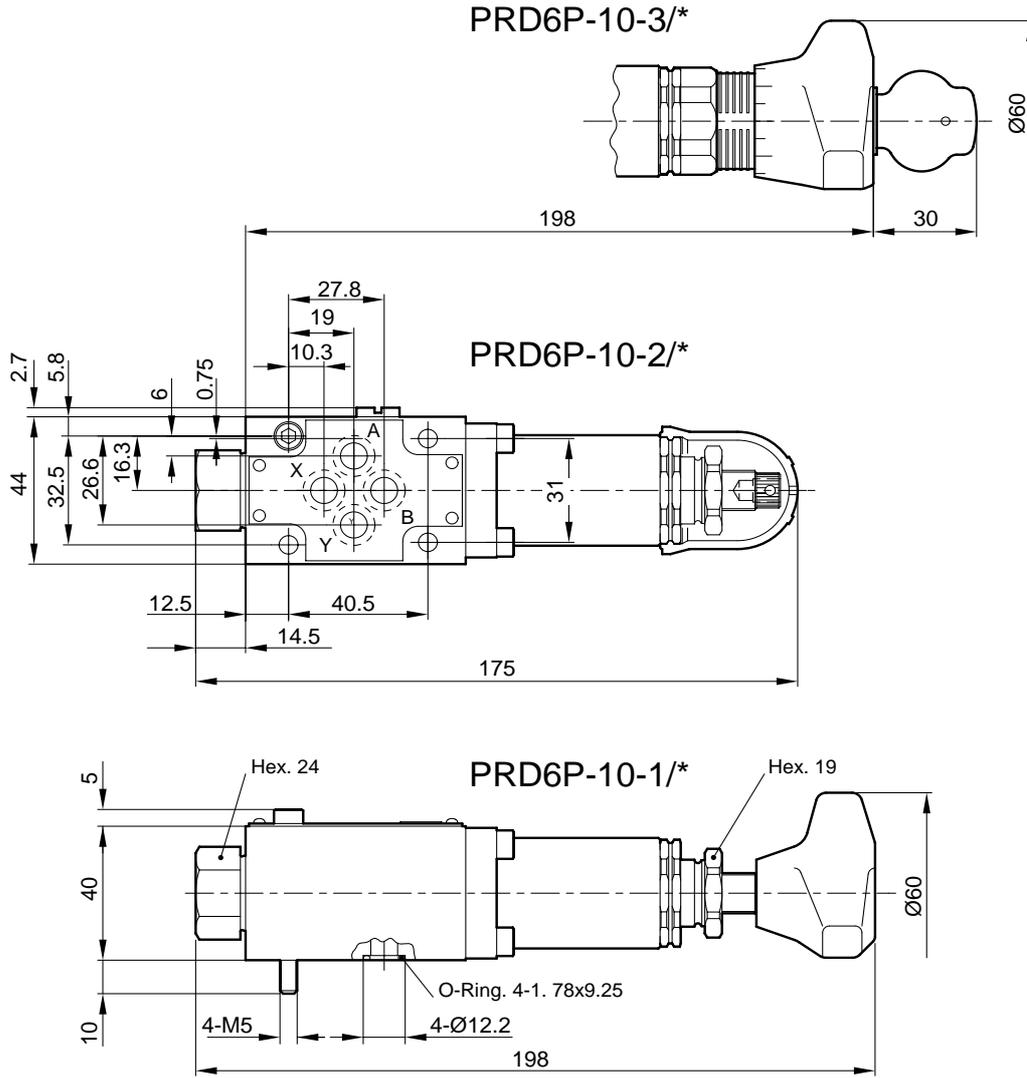

Attention !

The characteristic curves are valid for when the output pressure = zero over the complete flow range.
